Solution Overview

BGAN Terminal

Explorer PTT

Celluar Router

LMR

HyphaSATPTT offers a clear path to the future of critical communications, while offering a modular approach that lets you build on your existing infrastructure. This allows you to extend your existing terrestrial network to ensure global coverage without additional infrastructure to build or maintain.

- Extend your coverage beyond existing radio or cellular connectivity
- Least-cost routing of voice and data traffic
- Seamless switching between bearers ensures constant communication
- Voice and data anywhere via multiple-bearer redundancy
- Integration to radio network cores via SIP or 4-wire E&M
- Unlimited number of talk groups
- Efficient and secure mobile broadband solution
- Cloud-managed infrastructure that can integrate to core systems

HyphaSATPTT can be configured and managed using a web-based portal.

- Easy talk group configuration
- Pre-configured E&M radio interfaces
- Advanced options such as tracking or voice recording
- Over-the-air updates and programming
